PUBLIC HEARING: Director District Boundary Review – Thiele

**Action to be taken: The Administration will present proposed modifications to Director District boundaries equalizing the populations served in each director district; the Board will conduct a Public Hearing on the proposed changes. No Board action during this meeting.**

All school districts are required to review and realign, if necessary, Director District boundaries upon receipt of the census data. (Boundaries may also be reviewed any time the Board believes an imbalance exists, but are *required* to do so upon receipt of census data). These boundaries exist to assure district-wide balanced representation on the local school board based on community populations.

The District contracted with Sammamish Data Systems to study the information from the census, review existing boundaries, and make recommendations as needed.

RCW 29A.76.010 and the current map and the proposed map along with population distribution are attached to the agenda for review.
